

ESERCIZIO:

Creazione e configurazione laboratorio virtuale

Innanzitutto, ho installato le tre macchine virtuali (KALI, Metasploitable e Windows 7, FIG. 1-2-3).

Dopodiché ho configurato le macchine su rete interna e datogli un indirizzo IP a ciascuna. Disattivato il Firewall su Windows 7, poiché creava un problema tale che bloccava il ping nei confronti delle altre macchine (FIG. 4).

Ed infine, ho effettuato il test ping tra le varie macchine con risultato positivo (FIG. 5 - 6 - 7).
